REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Newly cited references Van Wicjck(6,592,942B1), Haukka et al (US 2004/0043557A1) , and Chou et al (US 2004/0256664A1) are considered relevant to applicant's disclosure. The prior art of record does not teach or suggest all of the limitations of the allowed claims. Van Wijck discloses the formation of a nucleation layer by atomic layer deposition and then a vapor deposition of a bulk layer (col. 5, lines 37-48). Haukka et al discloses the deposition of an aluminum oxide layer by ALD and the deposition of a metal oxide layer on the aluminum oxide layer and the surface of the substrate may be exposed to an oxidant before the aluminum precursor is flowed into the reactor(paragraph 0059 and 0051) and the metal oxide can be deposited by CVD(paragraph 0102). Chou et al discloses the exposure of a substrate to oxidant prior deposition by atomic layer deposition(paragraph 0021). In both Chou et al and Van Wickjck the precursors contain oxygen, and in Van Wicjck there is no teaching of supplying oxidizing gas before the atomic layer deposition step. Van Wicjck teaches monolayer(col. 5,lines 42-45). Haukka et al teaches monolayer(paragraph 0009). In Haukka et al , the monolayer does not contain the same metal as the metal oxide, as the metal of the monolayer is aluminum.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
